What is The Science Club?

The Science club at Torquay State School offers students an opportunity to discover the fun of science and make new friends.

The Science Club sessions are run every Tuesday and Thursday morning break.

Tuesday - Years 5-7

Thursday – Years Prep - 4

The sessions run for approximately 30 minutes. Experiments are chosen by the students and often run over a number of weeks to allow all interested students to be involved.

The activities are always hands on although some students just enjoy looking at the live displays and asking questions. Everyone is welcome.

Term 2

Students have started growing Crystals. Some have met with great success others not so. That is the nature of experiments. When the crystals are fully grown the students will have the opportunity to take their crystal home.
